Named. Bacon: See all the necks stretched out of the windows ol the factory?" Egbert: Yes, waiting for the circus parade."

"What kind of a factory is it?" "Looks like a 'rubber' factory." Misses Cora and Dalsy ..... are visiting relatives and friends in 'Dixie."

### THE EUROPEAN WAR A YEAR AGO THIS WEEK

Sept. 13, 1914. Germans repulsed at Nancy and Luneville, and driven from Amiens Revigny and Brabant-le-Rol. German forces occupied prepared

positions along the Aisne. Heavy fighting at Louvain. Malines, Bortzy and near Thann. Russians gained victories west and northwest of Lemberg.

Germans occupied Karangu British East Africa. German cruiser Hela sunk by British submarine.

Sept. 14, 1914. Amiens reoccupied by French. Battle of the Aisne began, Ger mans repelling all attacks. Fort of Troyon relieved.

Germans laid waste Senlis. Russians crossed the San. Germans were defeated near Mlawa and sent re-enforcements to

Japanese flanked Klaochow. Germans occupied Fanning is land and cable station. Anti-Austrian demonstration in

American Red Cross steamship Red Cross salled from New York.

Sept. 15, 1914. Battle of Soissons fought. German crown prince's army driven back to the Orne. French reoccupied Reims.

La Ferte ransacked by Germans Franco-Belgian forces won at Alost and Rousbrugge. Russians occupied Grodek.

Germans reported defeat of Russian armies of Vilna and Grodno. Serbs invaded Hungary. Japanese cavalry captured Chimo British defeated Germans In Na-

magualand. Artists protested to kaiser against destruction of Louvain.

Sept. 16, 1914.

Belgian commission presented to President Wilson list of alleged atrocities by Germans in Belgium New battle begun from Noyon to Verdun.

French army from Rouen circled Von Kluck's corps.

Germans advanced on Antwerp. Montenegrins defeated Austrians near Koulilovo.

John Redmond called on the Irish to enlist. German government notified

China that Germany reserved right to deal with China as she saw fit because of breach of neutrality. Pro-ally war riots in Italian

Sept. 17, 1914. German army strengthened between Berry-au-Bac and Argonne. French advanced in the Woevre

district. Belgians repulsed attack on Ter Austrians fied before Russians to

ward Cracow, General Rennenkampf blocked flanking movement by Germans. Austrian warships shelled Semlin and Belgrade and were repelled by Serb artillery.

German fleets in Baltic fired on sach other by mistake. Prize courts established in Eng

Sept. 18, 1914. Germans destroyed Termonds. Reims bombarded by Germans and famous cathedral damaged. Battle of the Aisne continued, allies' left advancing and Germans gaining in center.

Germans intrenched on the Sam Russians took Siniava, Sambo and Kazeshow.

Germans advanced against Rus alans in Suwalki province. Germans defeated by garrison o seven British at Nakop; Africa. Bombs dropped on Antwerp by

### Government Breeds Fine Horses for Army Mounts

W ASHINGTON -The result of the government's experimental work in horse breeding, begun in 1913, is interesting. Unlike foreign governments, the United States had made no experiments in the scientific breeding

of horses for army uses, and it was only as the result of a recommendation to congress by a number of experts who had inspected foreign studs that an appropriation of \$50,000 was set aside and the work turned over to the department of agriculture, which in turn delegated it to the bureau of animal husbandry. The ob-ject was to produce desirable types of cavalry remounts and artillery

Thoroughbred sires had been pronounced most serviceable by continental experts and the project was undertaken along the same lines here, though there was a desire to try other light horse types of stallion, and a few trotting, saddle and Morgan sires were nicluded in the original stud.

The war department had received as a donation the thoroughbred sires Octagon by Rayon d'Or, dam Ortegal by Bend Or, and Henry of Navarre by Knight of Ellerslie out of Moss Rose by The III Used, from August Belmont, president of the Jockey club, and these were turned over to the department

Other thoroughbreds were purchased and there are now at the station at Front Royal, Va., eighteen sires, of which ten are thoroughbreds, the others being trotters and saddle stallions

The prepotency of the thoroughbred, experts declare, makes him ideal for the work in hand, and, as racing was in its darkest days when the work was inaugurated, the task of securing horses of quality was easy. There was a disposition from the start to render the government every assistance in a work that is regarded as second to none in economic importance,

With Russia's appropriation for horse breeding totaling more than \$4,000. 000 for 1914, and the czar adding more than \$1,000,000 in the same period from his private purse, there was cause for faultfinding when the appropriation for the work in the United States during the same period was cut from the original \$50,000 to \$30,000. Now the department has been notified that it must carry on the work for the coming twelve months for \$25,000, and there is certain to be an appeal to congress as soon as the house convenes.

# "Snookums" Gets a Government Job at the Zoo

T usually takes a civil service examination to enter the United States govarnment's surveying corps, but such red tape did not trouble "Snookums." He nonchalantly annexed himself to the government surveying party at Papago reservation, Arizona, and now

he has obtained a permanent appointment. He even got free transportation to Washington to take his new job. Now "Snookums" is on duty at the Zoo. He doesn't have much to do-just walk up and down for visi-

tors to look at, but a number of calls already have been paid by government surveyors, for his fame had preceded him. Edward Anderson, Jr., son of Dr.

and Mrs. Edward Anderson of Rock-

ville, discovered "Snookums." His position not only found him, but those who assigned him to it had an interesting time spiriting him away from his mother. He was found while Mr. Anderson and his associates were surveying near the Mexican line, in Arizona.

The wildcats are regarded as dangerous animals in that region, and even after "Snookums" was taken to camp, it was feared his mother might track him by night and put up a fight to rescue him. But the rest of the family probably kept her home

The party became attached to the mascot, and, when the work was done it was decided that "Snookums" ought to remain in the government service. Superintendent Baker of the Zoo here wrote that he would be glad to provide permanently for the animal.

Meantime the cat had become domesticated. He was friendly and intelligent. He did not much like being placed in a box for shipment East, but even at that indignity he did no more than show his teeth and ugly claws. On his box was placed the inscription, "My name is Snookums. Treat me well. I am from Arizona."

# Washington's City Market Proves Big Success

THE effort to make Washington the experimental ground for the development of scientific methods of food distribution is, in less than a year's time, showing practical results that stand as a working model for any city whose population wants to reduce the

cost of living.

This is due largely to the efforts of John H. Sherman, superintendent of the weights, measures and markets department of the District of Columbia, who has taught the housewives how to eliminate the middleman by community buying.

A nucleus for the proposed market system already existed. Three municipal retail markets were operating with indifferent success, isolated Mr. Sherman persuaded congress to

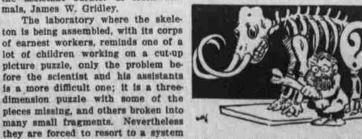

from the sources of their supplies. appropriate \$32,000 for steel shelters along Big B and Little B streets, N. W., and then obtained another appropriation-\$235,000-for a terminal market, to be erected on the wharves, for the wholesale distribution of fish and produce from the Potomac valley.

Mr. Sherman's enthusiasm in his attempt to reduce the living expenses of the masses in the city of Washington is not to be confined to the District of Columbia, but the plan as outlined and partially materialized will stand as a working model for other cities whose infant death rate and racial suicide are statistically known to increase proportionately with the cost of foodstuffs. Washington feels that there is a splendid purpose back of this experiment, far-reaching in its various individual phases, which extend from the hardworking farmer who jogs into market long before dawn to the worried woman whose household expenses are such that there is no chance to lay aside enough for the education of her children.

# Putting Together Bones of Mastodon Is Puzzle

THE preparators and aids in the section of vertebrate paleontology of the United States National museum are busy putting together the bones and er discoveries made as a result of the performance of the suffragette "arson fragments of a huge skeleton of a mastodon secured near Winamac, Ind., by the assistant curator of fossil anithe chancel, of which no one had

mals, James W. Gridley. The laboratory where the skeleton is being assembled, with its corps of earnest workers, reminds one of a lot of children working on a cut-up picture puzzle, only the problem before the scientist and his assistants is a more difficult one; it is a threetion of metals; this is put into a dish dimension puzzle with some of the pieces missing, and others broken into

similar to that employed on a picture puzzle in many ways, for a small piece touches the plate, then is taken out, is first examined carefully, then tried here and there, until presentlycureka!-it fits exactly, or so nearly so that its position is definitely determined, and then the assembler takes up another fragment with renewed

The specimen is believed to be that of a full-grown male, although not an old individual, who lived in the pleistocene age, probably 150,000 years ago. This animal, while it is related to the elephant family, differs in general proportions of the skeleton and through the character of its teeth, which unlike the flat, grinding ones of the elephant, are more of a rugose type with pointed corrugations calculated to have been used in crushing as well as grinding the coarse vegetable food on which it lived. The largest of the teeth measures nearly seven inches in length and is about four inches across, weighing several pounds.
